

2ND FORUM ON THE MACROECONOMICS OF GREEN AND RESILIENT TRANSITIONS

JUNE 16-18, 2025 • COPENHAGEN, DENMARK

Countries around the world are grappling with the impacts from a warming planet and the challenges and opportunities of an emerging global green economy. As they do so, Ministries of Finance and other economic ministries are facing daunting new questions. How to manage the fiscal challenges of investing in green energy, coping with climate risks, funding resilience, and supporting green manufacturing? How to build industries to compete in the global green economy? How to manage and overcome the impacts on workers and communities? How to manage emerging macroeconomic risks from shifting global supply chains? How to plan for and spur improvements in the cost and performance of technologies? How to coordinate rapid changes in many interlinked sectors, across many countries connected by trade flows?

With little time to lose, Ministries of Finance and other economic ministries urgently need credible information and evidence to navigate these emerging challenges and opportunities. This requires close collaboration between these same decision makers and the analytical community on which they rely – in governments, think tanks, and universities. It requires new tools, methods, and datasets designed to answer the questions of today that match countries' varying needs and capabilities. And it calls for a community effort to share ideas, methods, and lessons learned among those who develop analytical methods, those who apply them for policy assessment, and those who use the results for real-world decision making.

The 2nd Annual Forum on the Macroeconomics of Green and Resilient Transitions will bring together economic policy makers and applied economic modelers and analysts – from finance and economic ministries, development banks, universities, and think tanks – to work together on the information and evidence base needed for green and resilient economic transitions. The Forum provides an opportunity for Ministries of Finance and other economic decision makers to lay out their challenges, needs, and asks; it provides an opportunity for the analytical community to showcase methods and data that might meet these challenges, needs, and asks in diverse circumstances; and it provides a venue to discuss ways that these communities can work together to build the evidence base for green and resilient economic transitions.
